Rohan Doctor - Introduction

Rohan Doctor is the Founder & CEO of Louisa AI, a relationship-intelligence platform built on a simple belief: technology should bring people closer, not replace them.

After studying Physics at the University of Oxford, Rohan spent 17 years at Goldman Sachs, working across London, Hong Kong, and New York, where he helped build an internal AI platform to connect people and expertise across a global organisation. He later went on to found Louisa AI as an independent company serving institutions around the world.

As a proud Zoroastrian, Rohan draws deeply from the principles of Good Thoughts, Good Words, and Good Deeds, which guide both his personal journey and his approach to building ethical, human-centred technology. Through Louisa AI, he seeks to demonstrate that innovation and integrity can — and must — progress together.

Beyond his work as an entrepreneur, Rohan is actively engaged with the global Parsi community, mentoring young professionals and speaking on the responsible use of AI. He is also committed to supporting the next generation, and through Louisa AI offers internship opportunities for young Parsis in New York and Mumbai. His work reflects a modern expression of Zoroastrian entrepreneurship — combining progress, purpose, and service in the age of artificial intelligence.
